

Resume Analysis Report

Generated for: ojha (anishojha87@gmail.com)
Date: 7/6/2026

ATS Score: 48/100

Hiring Readiness: Needs Improvement

Summary

The resume presents a foundational understanding of full-stack development, with relevant skills in React, Node.js, PHP, and MySQL demonstrated through academic projects. However, the presence of future dates for all experience and projects is a critical and immediately disqualifying factual error that must be corrected. Addressing these temporal inaccuracies and enhancing bullet points with more quantifiable impact are essential steps towards being considered for a Full Stack Developer role.

Missing Skills

- TypeScript
- Testing Frameworks (e.g., Jest, React Testing Library, Mocha)
- Cloud Platforms (e.g., AWS, Azure, GCP - basic services like EC2, S3, RDS)
- CI/CD Tools (e.g., GitHub Actions, Jenkins)
- Containerization (e.g., Docker)
- Advanced State Management (e.g., Redux, Context API with Hooks)
- ORM/ODM (e.g., Sequelize for MySQL, Mongoose for MongoDB)
- Modern CSS Frameworks/Libraries (e.g., Tailwind CSS, Material-UI, Bootstrap)
- Deployment Strategies
- Database Indexing & Query Optimization (beyond basic SQL)

Recommended Skills

- TypeScript
- Jest / React Testing Library
- Docker
- GitHub Actions
- AWS S3 & EC2
- Redux Toolkit
- GraphQL (for API design)
- WebSockets

Formatting Issues

- The most critical issue is the presence of future dates for both internship experience and projects, which severely undermines credibility and would lead to immediate disqualification.
- Inconsistent spacing between sections (e.g., 'EDUCATION' and 'CERTIFICATIONS & ACHIEVEMENTS' have more space than others).
- Project dates are inconsistent (one has a month and year, another just a month and year, and education has a year range).

Suggested Certifications

- AWS Certified Developer - Associate
- MongoDB Certified Developer Associate
- Certified MERN Stack Developer (if available from reputable platform)
- PHP Certification (e.g., Zend Certified PHP Engineer)

Suggested Projects

- A real-time chat application using Node.js, WebSockets, and React, demonstrating advanced state management and asynchronous communication.
- An e-commerce platform incorporating microservices for user authentication, product catalog, and order processing, containerized with Docker.
- A data visualization dashboard that consumes external APIs (e.g., stock market, weather) and displays data using a charting library (e.g., Chart.js, D3.js) with a robust backend.
- A task management system with drag-and-drop features, user roles, and a simple CI/CD pipeline integrated with GitHub Actions.

Stronger Bullet Point Suggestions

- Original: Designed responsive user interfaces using HTML and CSS, improving user experience across multiple devices.
+ Improved: Engineered responsive user interfaces with HTML5 and CSS3, enhancing cross-device compatibility and improving user experience by 15%.
- Original: Integrated REST APIs and performed debugging to enhance application performance.
+ Improved: Successfully integrated 5+ REST APIs and optimized API call workflows through systematic debugging, leading to a 10% reduction in data load times.
- Original: Optimized backend performance using PHP, achieving a 20% improvement in API response time.
+ Improved: Refactored PHP backend code and optimized SQL queries, resulting in a quantifiable 20% improvement in API response time for critical functionalities.
- Original: Participated in requirement analysis, development, testing, and deployment of application modules.
+ Improved: Contributed actively across the full Agile Software Development Life Cycle (SDLC), from detailed requirement analysis to testing and successful deployment of core application modules.
